

Who Limbach is

Public mechanical contractor, founded 1901, HQ Warrendale, PA. FY2024 revenue \$518.8M, FY2025 guidance \$650-680M, ~1,400 team members across 20 offices in the eastern US. Six verticals: healthcare, industrial and manufacturing, data centers, life science, higher education, cultural and entertainment. Majority of craft workforce is under collective bargaining. Business is shifting fast toward Owner Direct Relationships (ODR), which hit 76.6% of Q3 2025 revenue.

Labor is the cost lever. This is what visibility on it looks like at Limbach.

REVENUE FY24	REVENUE FY25E	ADJ EBITDA FY24
\$518.8M +0.5% YoY	\$650-680M	\$63.7M +36.1%
GROSS MARGIN FY24	TEAM	OFFICES
27.8%	~1,400	20 · Eastern US
HQ	FOUNDED	OWNERSHIP
Warrendale, PA	1901	Public · LMB
ODR · Q3'25	CRAFT	VERTICALS
76.6%	Union majority	6 · MEP owner-direct

Notable recent moves: acquired Pioneer Power (industrial mechanical, Upper Midwest) for \$66.1M on Jul 1, 2025, adding ~\$120M annualized revenue from 2026. Consolidated Mechanical (KY/MI/IL) was added in 2024 for \$23M. ACME Industrial Piping and Industrial Air were acquired earlier in 2024. A national healthcare owner engagement across 20 locations produced \$12M in capital projects at four sites in Q3 2025.

Three public signals from the last 12 months

Q3 2025 call: gross margin guide cut to 25.5-26.5%, T&M is ~1/3 of ODR.

Nov 27, 2025 · [Q3 2025 earnings call transcript](#) · **STRONG**

→ Camera-on-helmet footage ties billed T&M hours to observed install activity. On a \$165-175M annual T&M run-rate (FY25 midpoint × 76.6% ODR × ~33%), even a 50 bps billing-accuracy gain is real money. Defends gross margin in the fastest-growing segment.

Pioneer Power closes: four industrial mechanical acquisitions in 18 months.

Jul 1, 2025 · [Acquisition press release](#) · **STRONG**

→ Four field-ops cultures, four tool stacks, different craft locals. Per-worker productivity data is the fastest way to normalize output across the acquired companies without a multi-year ERP lift. Wearable rollout is days, not quarters.

Nick Angerosa promoted to EVP National Customer Solutions (from Pres, Southeast).

Jan 13, 2026 · [Limbach press release](#) · **STRONG**

→ Fresh EVP, ops background, national charter, stated focus on data center and industrial growth. The announcement itself names "tools, data, and insights" as the equipping mandate. Short political window to place a category bet.

Who to call, and why them

Nick Angerosa

EVP, NATIONAL CUSTOMER SOLUTIONS · LIMBACH

PRIMARY 13 YRS AT LIMBACH EX-PRES, SE REGION

Appointed to the new national role on **Jan 13, 2026**. Came up through regional operations, not sales. His public charter integrates operational insight across national customer accounts, with an explicit tilt to data centers and industrial.

Route in: LinkedIn note referencing the appointment plus one line on what Ironsite's first-week output would look like for a Pioneer Power or CMI crew. 15 minutes, one crew, one scope.

[LinkedIn](#) · [Appointment release](#)

Jayme Brooks

EVP & CFO · LIMBACH

BACKUP MARGIN DEFENSE ANGLE

Q3 2025 guidance cut gross margin from 28-29% to 25.5-26.5%. Per-worker productivity data is a margin-defense tool that a CFO can expense against FY26 EBITDA targets.

[Limbach leadership page](#)

What Ironsite's dashboard would show after week one

ILLUSTRATIVE This is my best reconstruction of what Ironsite's first-week output would look like for a mechanical crew of this size, built from published field-productivity research. All names, dates, and specific numbers are mock. Percentage ranges are cited below.

IRONSITE // CREW WEEK 01

IND-MECH · Healthcare central plant · Midwest · Mon-Fri

CREW ROSTER · ILLUSTRATIVE

WORKER	ROLE	LOCAL	SHIFTS	BILLED HRS	OBS. INSTALL %
D. Reyes	Foreman	UA Local (Midwest)	5	50.0	18%
T. Novak	Journeyman Pipefitter	UA Local (Midwest)	5	50.0	31%
M. Kowalski	Journeyman Pipefitter	UA Local (Midwest)	5	48.5	29%
A. Okafor	Welder	UA Local (Midwest)	4	40.0	34%
J. Bellamy	Apprentice Pipefitter	UA Local (Midwest)	5	50.0	22%
R. Ortiz	Helper	Non-UA	5	45.0	19%

CREW TIME BREAKDOWN · WEEK 01

WORKER	INSTALL → PREP → WAIT → COORD → REWORK	BILLED HRS
D. Reyes		50.0
T. Novak		50.0
M. Kowalski		48.5
A. Okafor		40.0
J. Bellamy		50.0
R. Ortiz		45.0

INSTALL PREP & STAGE WAIT COORD REWORK

Ranges used: install 25-35%, prep/stage 35-45%, wait/coord 10-20% combined, rework 5-10%. Anchored to [McKinsey MGI, Reinventing Construction \(2017\)](#) and FMI rework research. The mock shows ~28% average install, ~39% prep, ~15% wait, ~14% coord, ~6% rework.

T&M SUBSTANTIATION · SCOPE HOURS OBSERVED VS. BILLED

SCOPE	BILLED	OBS. INSTALL	OBS. PREP	DELTA	FLAG
Chilled water pipe (2nd-flr header)	88.0	27.5	46.0	+14.5 stage-heavy	Review

SCOPE	BILLED	OBS. INSTALL	OBS. PREP	DELTA	FLAG
VRF riser weld-ups	56.0	20.5	20.0	+15.5 wait/coord	Review
Isolation valve install	24.0	8.0	10.5	+5.5 rework	Dispute risk
Mechanical room GC cleanup	12.0	4.0	7.5	~aligned	OK

SAFETY FLAGS · WEEK 01

DAY / TIME	TYPE	WHAT IRONSITE SAW
Mon 09:14	● PPE	Helper (R. Ortiz) <6 ft from active welding without screen; flash-risk event logged.
Tue 13:48	● Lift	Scissor lift extended with a 3rd worker on deck; exceeds manufacturer capacity for this model.
Wed 10:22	● Proximity	Pipefitter within swing radius of unattended overhead load during rigging.
Thu 15:10	● Hot work	Fire watch left position 6 min before burn-cool timer expired.

ILLUSTRATIVE ROI · INSTALL SHARE → T&M RECOVERY

TARGET INSTALL SHARE (WEEK 01 BASELINE: 28%) 33%

At a 5-point gain on a \$170M annual T&M run-rate, recovery is roughly **\$8.5M/yr** of billable time currently sitting in prep, wait, and rework.

Math: $(\text{target} - 28) \times 0.01 \times \170M . \$170M is the midpoint of the FY25 T&M run-rate derived in Section 2.

WHAT A SUPER COULD DO WITH THIS WEEK ONE

- Pull Tue 13:48 clip for toolbox talk; retrain on scissor-lift ratings with the whole crew.
- On the VRF riser scope, pre-stage weld-up components Sunday night so Tue/Wed aren't front-loaded with prep. Target install share back above 30%.
- Have Reyes walk the isolation-valve rework with apprentice Bellamy before submitting that line on the next T&M ticket; either pull hours back or document cause of rework.

What Angerosa will push back on, and the honest answer

01 **"Our craft is majority UA and IBEW. Worker-mounted cameras are a bargaining-unit fight we're not looking to pick."**

Fair, and worth naming on the first call. The clean path is a pilot on a single crew with the local's rep in the room, footage retained by Limbach, and written scope limits on use (T&M substantiation, safety review, no performance discipline). Most recent wearable-camera pilots at union mechanical contractors have landed on that kind of written MOU. Ask UA Local (Midwest) before any rollout, not after. Worth saying plainly: a merit shop or employee-owned contractor is a cleaner first logo for the product. Limbach is the harder pilot and the right one if the MOU path works.

02 **"Pioneer Power and CMI already run their own foreman tracking and we just bolted Procore and safety cameras onto the eastern offices. What does wearable add that we don't have?"**

Procore captures what was planned and logged. Fixed safety cameras cover fixed locations. Neither gives you per-worker install time on a cost-plus scope, and neither produces a clip you can send a healthcare owner in an hour when a T&M ticket gets disputed. Wearable is specifically for the field labor gap between the plan and the invoice.

03 **"We cut gross margin guidance this quarter because of mix and acquisition integration, not field productivity. Adding a hardware line item doesn't help in 2026."**

Acquired companies is exactly where the ROI shows up. On a single Pioneer Power crew, moving install share from a week-01 baseline of ~28% to 33% on T&M scopes is worth more than the hardware cost for the year. The pilot is small. The downside is a refund and 90 days of dashboards. The upside is a normalized per-worker baseline across four acquisitions.

Two drafts for the first message to Angerosa

LINKEDIN DM

DRAFT · NOT SENT

Nick, congrats on the national role. The week one readout is my best guess from public research, not a prescription. Saw the Jan 13 release and that the Q3 call flagged ~1/3 of ODR sits in T&M. I put together a sample first-week Ironsite readout for one industrial mechanical crew at a healthcare plant. 15 minutes to walk through it? Happy to send the link either way.

DRAFT · NOT SENT

SUBJECT · T&M SUBSTANTIATION FOR PIONEER POWER AND CMI CREWS

Nick,

Your Q3 call put T&M work at about a third of ODR. Limbach has a margin-defense story to write there, and the Pioneer Power and CMI integrations are the fastest place to produce a normalized per-worker baseline.

I put together a first-week Ironsite readout for one industrial mechanical crew as a sample of what that looks like. The week one readout is my best guess from public research, not a prescription. Static, no commitment.

15 minutes the week of May 5 to walk through it?
